

# City researcher had predicted tidal disaster

Sravani Sarkar  
Bhopal, January 7

A BHO PAL based researcher, who claims to have developed a method to predict natural and man-made disasters, had warned Indian authorities about sea tides lashing Chennai well in advance of the Tsunami disaster, albeit without any response. The warning letter had been sent to none other than the President Dr APJ Abdul Kalam on April 16, 2004 and to Chief Minister of Tamil Nadu J Jayalalitha as early as on October 2, 2003.

The researcher V K Sonakia, Deputy Director with State Department of Industries, had written to the President warning that sea tides might cause disaster at coastal cities like Chennai and Mumbai and also that a major earthquake might cause huge losses in the Tehri-Garnwal region within a year (of the writing of the letter). Though Sonakia received response from the President's office regarding another part of the letter (pertaining to prediction of air crashes), the warning of sea-tide was seemingly ig-

V K Sonakia

nored.

Not only this, Sonakia had written to the Tamil Nadu Chief Minister Jayalalitha as early as in October 2003, requesting the Chief Minister to draw out a disaster plan to mitigate various disasters including one caused by sea tides in Chennai.

Sonakia, who had also predicted Bhuj earthquake and danger to Bhakra Nangal dam, well in advance, lamented while talking to Hindustan Times that the authorities mostly ignore his claims and warnings, though there are more than ten instances where his predictions about major disasters have proven to be correct. It may be mentioned that Sonakia had addressed

Subject: Method Developed to detect-predict in advance Aircrashes (with date progress)

Using our system, we successfully detected & predicted following 2 major events before they happened in year 2001 -

PAST PREDICTIONS -

- 1) Bhopal Earthquake in India (News cutting enclosed)**  
Many letters were sent to Ministry of Science & Technology (we have in form of questionnaire, but except/forgo post) including disaster letter to PMO Office about method developed on 20/10/2001 (copy enclosed). Annexure-2B & 2C CM of Gujarat, had not got no reply from Government side.
- 2) Threat to Binoculars's Emergency like situation in India.**  
(13th December parliament attack)  
His informed Indian Army Local intelligence unit about threat to country before attack on parliament & Binoculars, which problem came true & 50 men was caught having plan to blow up Binoculars.  
(Letter written to chief of Army enclosed & Annexure-3C)

"MOTHER OF ALL INVENTIONS"

The method developed by us is "Mother of all inventions" and is useful. Had many based camera to detect methods (WTC USA like every natural disaster one year in advance).

Future application

In coming time we can successfully detect & predict year of disasters of 4 major world in India.

- 1) Year of Earthquake in India (Enclosed)**  
No reports on 7 states including Delhi (Bhakra Nangal) (spoke during enclosed). Division of new temples will change from East to West?

- 2) Year of Air-tide on specific spot like**

Number: 100000  
(Letter Department of Oceanography enclosed)

website saidisasterprediction.com  
(launched in 2000 where sunami threat to bombay & chennai)  
can be predicted in advance (अवश्य देखें)

## City researcher had predicted tidal disaster

a press conference in Bhopal warning about the Bhuj earthquake and also written to the then Gujarat chief minister Keshubhai Patel in October 2001 warning him of the impending disaster. The Bhuj earthquake hit on January 28, 2002.

Sonakia, who has already registered his method of detection (prediction) under the International Copyright Order (1999 number L 20881/2002), says that his method is set to revolutionise present scientific thinking. He said that his method is based on future imaging technique. It works on the concept of neural networking between the trio-force of cosmos, human body and the earth.

In simple words, Sonakia explained, there are some signs (in form of waves) given by nature and absorbed by the human body well in advance of disasters, the decoding of which (using the method developed by him) can predict the disasters.

Sonakia has already submitted his method for patenting and is expected to get the patent soon. Also his scientific pa-

per on the method was accepted at the SCI conference 2004 on "Earthquake Hazard and Disaster Prevention" held at Florida in USA.

The researcher said that he has offered the services of his method to various agencies of Union and State governments, but with minimum response. He said that anyone could learn the method with proper training within a period of six months to one year.

Recently Sonakia's name has also been included in the Contemporary Who's Who of the American Biographical Institute for his research work.
